# DIGITAL LITERACY PROJECT REPORTS

SUBMITTED BY :- PRINCE KUMAR
REGN NO. :- 25BAI11079
BRANCH:- BTECH
COURSE:- CSE(AIML)

# TASK 1:-

I created my digital literacy infographic using Canva, as it provides easy-to-use templates and design elements suitable for beginners. The design is a single-page visual that explains the concept of digital literacy and its importance for students in today's technology-driven world.

In my infographic, I covered three key topics: what digital literacy is, safe internet practices, and useful digital tools for students. I explained digital literacy as the ability to use technology effectively and responsibly. Under safe internet practices, I included tips like using strong passwords, avoiding suspicious links, and protecting personal information. I also highlighted useful tools such as Google Docs, online learning platforms, and collaboration apps that help students improve productivity.

While creating this design, I found it interesting to explore Canva's wide range of icons and layouts, which made the infographic visually appealing. However, one difficulty I faced was organizing all the information clearly within a single page without making it look crowded. This task helped me improve both my design and content presentation skills.

# TASK 2:-

For this task, I created accounts on **GitHub, LinkedIn, and Kaggle** to establish a strong digital and professional presence.

**GitHub** is a platform for hosting and collaborating on code repositories. I created a profile README including my name, branch, year, and a short statement: "I hope to learn AI/ML and contribute to open-source projects." Over the next four years, I plan to upload my coding assignments, projects, and collaborative work on GitHub, which will help me track my progress and showcase my skills to potential employers.

**LinkedIn** is a professional networking platform. I updated my Education section with my current degree (B.Tech), institution, and expected graduation year. I also plan to connect with peers, professors, and industry professionals, follow AI/ML communities, and stay updated with internship opportunities and career events.

**Kaggle** is a platform for data science and machine learning competitions. I set up my profile to start learning through hands-on datasets, practicing coding and ML techniques, and participating in beginner competitions. Over the next four years, I aim to gradually improve my Kaggle ranking and build a portfolio of projects demonstrating my data skills.

These platforms together will help me learn, collaborate, and build a professional digital presence for future academic and career opportunities.

# TASK 3:-

For this task, I used Google Forms and Google Sheets to create a "Digital Literacy Awareness Quiz" for my batchmates. The quiz consists of five questions, including multiple-choice and short-answer types, designed to test knowledge about digital literacy, safe internet practices, and useful digital tools. Google Forms allowed me to easily create the questions, customize the design, and share the form link with others.

I connected the form to Google Sheets, which automatically collects and organizes all responses in a structured spreadsheet. This helped me visualize the responses quickly and ensures that no data is lost. While building the quiz, I practised designing clear and concise questions, setting up multiple-choice and short-answer formats, and linking forms to spreadsheets for data management.

Using these tools is highly beneficial academically. They make it easy to conduct surveys, collect feedback, and organize data efficiently. Google Workspace also enhances collaboration, as multiple people can view or edit shared forms and sheets in real time. Overall, this task improved my digital literacy skills, taught me how to manage online data, and prepared me to use cloud-based tools effectively in my studies and future professional work.

# TASK 4:-

A situation where poor digital communication caused a problem could be a college student posting a private complaint about a professor on social media. The post was intended for friends but was shared publicly, leading to misunderstandings and disciplinary action by the university. This incident could have been avoided by considering the audience before posting, using privacy settings, or choosing a private conversation rather than a public post. Responsible digital communication involves thinking before sharing, verifying information, and maintaining a professional online presence. Social media is a powerful tool for networking and learning, but careless posts can damage personal reputation and relationships. By following simple Do’s and Don’ts, students can communicate effectively, stay safe online, and avoid unnecessary conflicts.

# TASK 5 :-

While researching online safety for college students, I was surprised to learn how easily financial frauds, especially UPI and online payment scams, can target young students. Many students unknowingly share OTPs or PINs, thinking the messages are from legitimate sources. This highlighted the importance of vigilance and verifying every transaction before proceeding. Another surprising fact was the speed at which attackers can misuse stolen personal or banking information.

As a result, one habit I will personally change is to never share OTPs or UPI credentials, even if the request seems urgent or comes from a trusted contact. I will also enable two-factor authentication on all my accounts and double-check payment details before completing any online transaction. Following these preventive steps will help me stay safe online and avoid potential financial or identity-related losses.
